Wall Trim Flashing
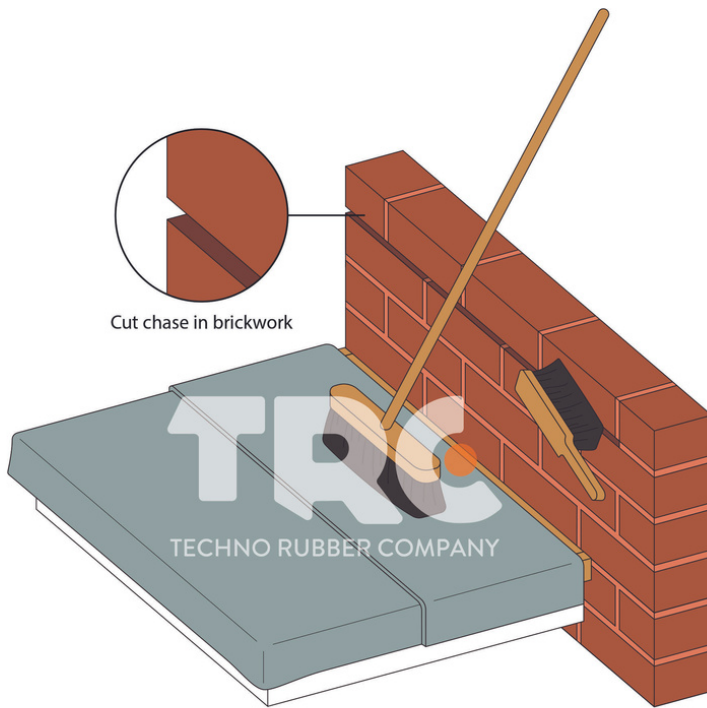

Step by step guide on installing wall-trim flashing to your next EPDM Roofing project.
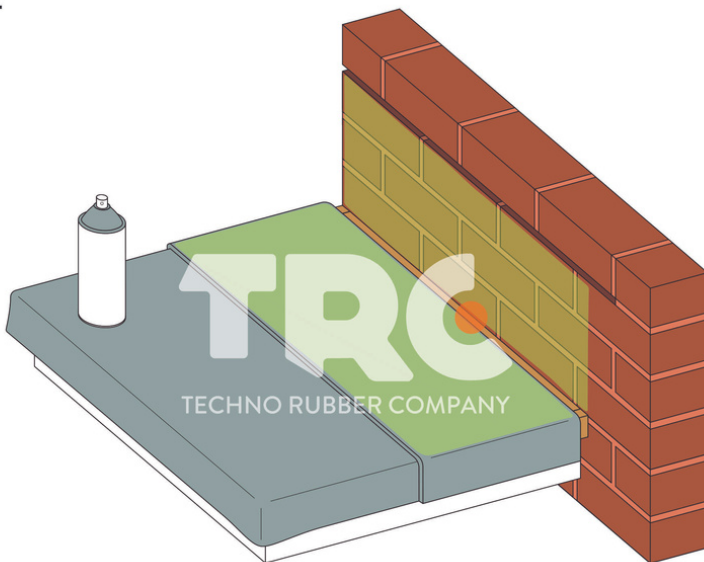

1

Cut chase in brickwork

Step 1
Thoroughly clean the wall, chase and rubber.

2

Step 2
Apply a thin coat of contact adhesive to the rubber and the wall .

3

Step 3
Once touch dry, starting at the bottom, carefully mate the surfaces together. Smooth by hand and silicone roller.

4

Step 4
Trim membrane.

5

Step 5
Position a piece of 9" Flashing tape or a Detail Kit as shown and mark the perimeter, allowing an extra 1 cm.
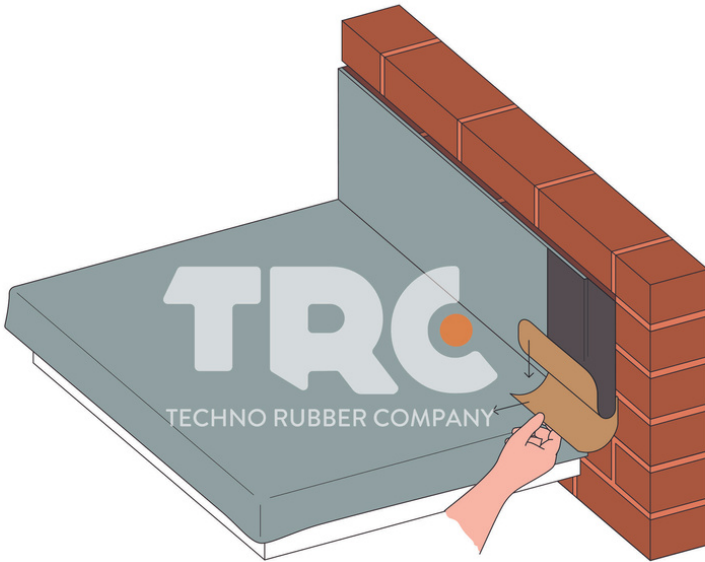

6

Step 6
Apply Primer to the marked area using a Scrubber pad and handle, allow primer to dry.
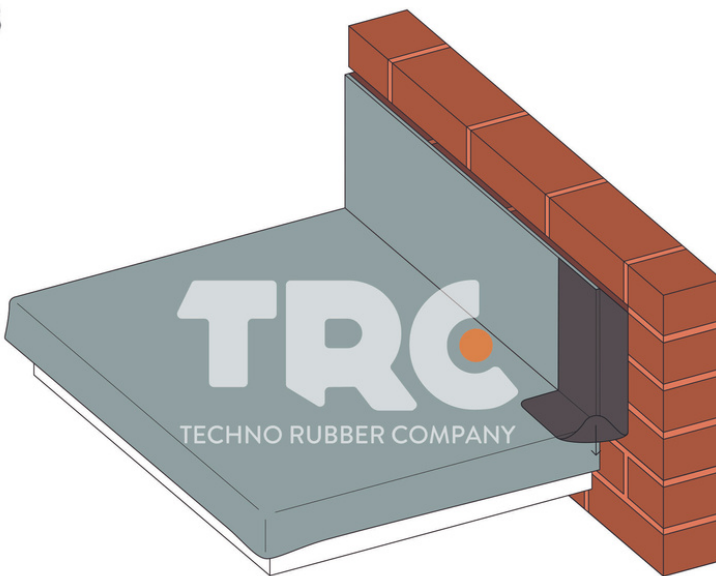

7

Step 7
Peel back a section of backing paper and, starting from the top, slowly work downwards as shown.

8

Step 8
Apply a gentle heat source to the corner if needed.

9

Step 9
Thoroughly roller with Silicone and Penny Rollers.

10

Step 10

Insert wall trim into chase and secure at 600mm centres with the supplied fixings. Rawplugs are not needed if a 5.5mm masonry drill bit is used.

11

Step 11

Thoroughly seal chase with Wall Mastic.
